

ESTA LLOVIENDO DE MEMORIA

ESTA ES una carta manchada con lágrimas, sus huellas lagrimales están aquí, calcadas. Esta es una habitación con cuatro paredes, menos por una que da a la memoria: pasan fechas, sucesos se suceden, sopla el ábrego y llega un pliego con lágrimas, arrugado.

Duele la luz como en un lienzo de Rembrandt.

Campos de tierra, que llaman, también, campos góticos. Iba contigo al pie de los álamos, moríamos un poco, echábamos los brazos a volar. (Temblaban tus muslos, se escurrían rápidos, como esos peces azules que dejan un rastro de plata en la ingle del mar...) Llorábamos y reíamos a la misma vez, otras veces llorábamos y nos besábamos a la misma boca. Caídos en tierra, el cielo azul crujía cuando le poníamos la vista encima. Se te acercaban las pupilas, saltaban hechas pedazos.

Esta es una historia muy corriente, pura, cristalina.

!Alamos que os estáis mirando en ella, testificad que esta carta, cada vez que la mecen en mi memoria, gotea lágrimas, alamito ^{azul} ~~menudo~~ en forma de pliego de mujer mojándola!...+

RESEARCH AND DEVELOPMENT

The first step in the development of a new product is the selection of a market. This is done by identifying the needs of the target market and determining whether the company has the resources and capabilities to meet those needs. Once the market is selected, the next step is to conduct a feasibility study to determine whether the product is economically viable.

THE RESEARCH AND DEVELOPMENT PROCESS

The research and development process is a multi-stage process that involves the identification of a market opportunity, the development of a concept, the design and construction of a prototype, and the testing and evaluation of the prototype. The process is iterative and often involves multiple cycles of development and testing. The final stage of the process is the commercialization of the product, which involves the production and distribution of the product to the market.

THE IMPORTANCE OF RESEARCH AND DEVELOPMENT

Research and development is a critical component of a company's strategy for growth and innovation. It allows a company to identify and develop new products and services that meet the needs of the market and provide a competitive advantage. Without research and development, a company would be unable to stay ahead of the competition and would likely be forced out of business.
